SEEDS • BULBS • PLANTS

To professional horticulturists and garden enthusiasts we present our Spring 1939 Catalog.

Collection of Outstanding Perennials

For Cut Flower and General Decorative Planting

To follow spring-flowering bulbs in the border and cut flower garden, this collection of perennials will produce a continuous supply of flowers until frost.

We have included a comprehensive range of color and type to satisfy a variety of tastes in perennial planting. We wish to emphasize that these plants will flower when available cut flowers are scarce in the garden.

Aster Frikarti, Wonder of Staffa

We consider this hardy aster the most outstanding introduction in years; certainly the most suitable hardy aster grown today. The plants are disease-resistant, robust, and bloom from July to November. It is therefore an addition to any perennial or border planting where showy mass effect is desirable. The plants are actually covered with lavender-blue flowers, $2\frac{1}{2}$ inches in diameter, borne on wiry stems, 2 to $2\frac{1}{2}$ feet in length.

Heliopsis Scabra Excelsa

Similar in habit to Helianthus, but bloom earlier, the flowering season being from mid-July to end of September. Almost double chrome-yellow flowers turning bright yellow as they mature. Height about 3 feet.

Heuchera, Pluie de Feu

The graceful habit and delicate beauty of this coral-red heuchera make it adapted for many purposes, being at home in any half-shaded or sunny position in the mixed border, in the rockery, or in mass plantings. The plants produce numerous slender erect stems about 18 inches high, that last in good condition for a long time. These form excellent decorative material and flower from late May through August.

Shasta Daisy, White Swan

Double white Memorial Day daisy. Pure white flowers on strong, wiry stems, 24 to 30 inches long. Blooms May to July.

Thermopsis Caroliniana

Yellow pea-like flowers produced in racemes 6 to 12 inches long during June and July. Has the appearance of a yellow Lupine. Rich green foliage. Height, 3 to $3\frac{1}{2}$ feet.

Veronica, Blue Spires

Far superior to the well-known Spicata. The plants, 2 feet high, produce lovely deep blue spikes of flowers in abundance throughout July and August. A fine, new introduction of real merit for the cutting garden or border.

DELPHINIUM PLANTS

Pacific Giant Hybrids. Delphinium experts throughout the country agree that this is the most outstanding new strain of Hybrid Delphinium today. They are truly sensational and reports from many different sections of the country as well as foreign lands are unanimous in the praise of this strain. Pacific Giant Hybrids possess many fine characteristics, namely: disease resistance, nicely formed bees, uniformity of habit, and massive tall spikes of slightly tapering formation. 3-inch pots. Doz., \$6.00; 100, \$45.00.

Galahad Series. Pure glistening white; individual flowers measure three inches in diameter. The plants are branching and the flowers are perfectly spaced on strong, tall stems. This white is as strong in habit as any of the best blues. Seed, see page 4. Doz., \$15.00; per 100, \$110.00.

AGERATUM

Purple Beauty. The deepest in color and finest of all Ageratums. Dwarf, uniform growth, very free flowering and disease resistant.

Rooted Cuttings, \$5.00 per 100; \$45.00 per 1000.

NEW BUTTERFLY BUSH

BUDDLEIA DUBONNET

This year we are pleased to announce the introduction of a new color in Buddleia. Just as Buddleia Charming was the outstanding flowering shrub novelty last year we anticipate an enthusiastic reception for Dubonnet. The firm full cylindrical spikes do not burn in the sun. The color is new in Buddleia and one that is momentarily very much in demand. As the name implies, it is the exact color of the French wine, a lovely soft sparkling red. Doz., \$15.00; 100, \$115.00.

BUDDLEIA, Charming

Charming. A real outstanding novelty among the summer and fall flowering shrubs. Vigorous and very free flowering, producing a profusion of large pink trusses which hold their pink color throughout the summer and fall and also under artificial light. Not only picturesque in the garden but extremely valuable as a late summer cut flower. Young plants set out in spring quickly attain a height of 4 to 6 feet and about four feet in diameter. Few other plants have attracted as much attention and favorable comment. We suggest pinching off the first flower spikes in July so that the side shoots will develop and bring better flowers later in the season. Doz., \$7.00; 100, \$50.00.

CHRYSANTHEMUM MORIFOLIUM

Alba. A pure white form of this beautiful species producing single flowers 2 to 2 1/2 inches in diameter in great profusion from early September to frost. Doz., \$6.00; 100, \$45.00.

Grandiflora. A companion to Morifolium Alba producing pink flowers with equal freedom twice the size of the well-known Morifolium. Doz., \$6.00; 100, \$45.00.

LIATRIS,
September Glory

GLADIOLUS - - See Pages 92 to 96

LIATRIS

Scariosa Alba. A new, pure white variety which grows about four feet tall. Valuable for cutting and should be included in every perennial border. Doz., \$5.50; per 100, \$38.00.

September Glory. Selected from a field of fine seedlings as perhaps the best late flowering type. For the first time we offer the plants. Extra long spikes of purple flowers from late August to frost. A real asset in the cutting garden and borders. Doz., \$5.50; per 100, \$38.00.

TAMARIX HISPIDA AESTIVALIS RUBRA

Summer Glow. A new summer flowering Tamarix. The effect of the graceful foliage of the Aestivalis is heightened by a profusion of wine-red blooms in August, when the borders are usually lacking in flowering shrubs. Especially well adapted for seashore and exposed plantings. Recommended for lining out for cut flowers in the garden. Height 4 ft. Doz., \$11.00; per 100, \$85.00.

A prolific bloomer and the blooms remain open all day even in the warmest weather. Kennedy Quality Lawn Grass Seed

For Permanent Lawns of Putting Green Texture

HOW TO MAKE A LAWN

The ground should be thoroughly prepared; that is, the soil should be fertilized, then turned over to a depth of six inches and pulverized. Sow good seed (which is very essential) roll the ground and cross roll in order to press the seed firmly into the soil. The proper time to sow grass seed depends upon the latitude. In the central and eastern states seed may be sown from March 1st to the end of June. Seed may be sown in the fall, from the first part of August to the end of October. Sow, if possible, when the ground is moist. For seeding a new lawn use 5 to 6 bushels to the acre.

KENNEDY'S BENTURF

Reg. U. S. Pat. Off.

Lawn Grass Seed Mixture (Bent Formula)

The popularity of golf in recent years has made comparison of lawns and putting greens an easy matter. One hardly expects his lawn to look as perfect as a putting green, but this is possible if sown with Kennedy's Benturf Lawn Grass Seed Mixture. With reasonable preparation and care excellent results have been accomplished with our Kennedy's Benturf Lawn Grass Seed Mixture which contains a large amount of Bent seed. This makes a compact, rapid growth, forming a close sward withstanding wear and tear. Lb., \$1.50; 5 lbs., \$7.00; 25 lbs., \$32.50; 100 lbs., \$125.00.

Lawn Grass Seed Mixture

This mixture is comprised of some of the quick germinating grasses as well as larger proportions of the permanent, deep rooted varieties. It has been tried in a great many sections of the country and has given excellent results where a quick cover was desired and has proven particularly adaptable for sowing on old lawns which have become shoddy and in need of renovating. Lb., 60c; pk., \$2.85; bu., \$11.00; 100 lbs., \$50.00.

KENNEDY'S

KENNEDY'S GREENTURF

Lawn Grass Seed Mixture (Formerly Kennedy's Green Velvet)

This is the lawn grass seed mixture which for over 25 years has seeded many of the most beautiful lawns in America under the name of Kennedy's Green Velvet Lawn Grass Seed Mixture. Recently worthless mixtures bearing the trade name "Green Velvet" have been marketed to the confusion of our patrons. To avoid this confusion we have changed the name to KENNEDY'S GREENTURF LAWN GRASS SEED MIXTURE. The seed in this mixture is all reclaimed and especially adapted to withstand the heat and drought of the summer. When properly sown and cared for GREENTURF will produce a beautiful green lawn the entire season. Lb., 75c; 5 lbs., \$3.60; bu., \$14.00; 100 lbs., \$65.00.

KENNEDY'S KWIKTURF

Lawn Grass Seed Mixture

Where a quick turf is desired which will remain green with a minimum of care and attention we recommend this mixture which is composed of deep rooting, strong growing grasses. Lb., 45c; bu., \$8.50; 100 lbs., \$40.00.

KENNEDY'S SHADETURF

Lawn Grass Seed Mixture

This is a mixture of extra fine grasses adapted for growing in the shade and under trees. We recommended the use of this mixture wherever other grasses, on account of shade, have failed to make a close sward. Lb., 85c; 5 lbs., \$4.00; bu., \$15.00; 100 lbs., \$70.00.

KENNEDY'S TENNIS COURT MIXTURE

The hardiest and finest low-growing grasses are contained in this mixture. It produces a beautiful and lasting green turf calculated to withstand hard wear and tear. Bu., \$18.00; 100 lbs., \$85.00.

SOUTHERN Lawn Grass Seed Mixture

A mixture prepared for Southern lawns and contains grasses best adapted for dry, hot sections in the South where many of the grasses will not thrive. We recommend seeding in the spring and fall. 100 lbs., \$60.00.

KENNEDY'S TERRACE MIXTURE

A mixture of strong, deep-rooted grasses for banks and terraces. Although the grasses are strong and deep-rooted, they will produce a fine, green velvety surface, and also prevent washing away during heavy rains. Lb., 85c; 5 lbs., \$4.00; bu., \$15.00; 100 lbs., \$70.00.

LAWN CLOVER—Dwarf White

The only variety suitable for lawns. Very dwarf and of a spreading habit. We advise sowing White Clover separately on account of the seed being much heavier than that of the finer grass seed. It has a tendency to work to the bottom of the receptacle it is being sown from and consequently the last part of the grass seed sown has a greater percentage of clover than the first. Lb., 85c.

POMPON DAHLIAS

POMPON OR BOUQUET DAHLIAS

From year to year we have added new varieties to our list of Pompons until there is considerable duplication which only results in confusion when a selection of Poms is to be made.

After a survey of the Dahlia Shows and trials this fall we have decided to confine our list to the best dozen Pompons available today. Recent introductions have the following to recommend them over their predecessors. A longer wiry stem, sometimes reaching 18 inches.

All the newer varieties are characterized by a reduction in the size of flower and a perfection of form and placement of petals. Lastly, the colors are truer and more distinct. For example, we do not hesitate to recommend Betty Anne as an ideal pink Pompon embracing all of the foregoing desirable traits without any faults we can discover.

We suggest a careful consideration of the following list with the descriptions and advise your replacing some of the old ones with these new perfected types.

DWARF DAHLIA PLANTS

Strong young plants only, ready at planting time in May.

This wonderful new race of dahlias has remarkable value for garden planting though they are not less desirable for cutting. The plants grow into dwarf compact bushes which seldom measure more than 2 feet in height. They begin blooming when they are a little more than a foot tall and flower continuously from early summer until frost. Splendid for beds, borders, and mixed plantings.

Christine. Dainty pure white flowers of small size.

Easter Greeting. White flowers somewhat larger than Christine, but not as early.

Kennedy Kwality Exhibition Gladiolus

In recent years there has been great improvement as to color and size of this wonderful flower, so in compiling our list, great care has been taken to select the best varieties in each color. Their long flowering season and stately habit together with their great variety of color and adaptability for all decorative purposes, command for them a prominent position in every garden. Those who wish to have an exhibition collection will do well to select from our list those varieties which are printed in capitals. A succession of bloom may be had by planting the bulbs at intervals of two weeks from April 15th to July 15th.

We guarantee our bulbs to be the largest size and well matured, which is absolutely essential for producing exhibition flowers.

OUR GLADS ARE FREE FROM THRIP!

Due, no doubt, to scientific treatment of planting stock for the past seven years our Gladioli have always been free from thrip. As an added precaution and to be sure that bulbs supplied by us are absolutely free from this pest, we will also scientifically treat our bulbs again before shipment is made to our customers.

Inasmuch as thrip lives in the soil, as well as on the bulbs in storage, through the winter, it is imperative that our bulbs be planted on soil where Gladioli were not grown last year and not close to other Gladioli from other sources.

Kennedy Kwality Hardy Everblooming Roses

EXTRA HEAVY 2-YEAR-OLD BUDDED NURSERY-GROWN STOCK

The Roses offered in this list are of the Hybrid Tea class, which are commonly known as Everblooming Roses, and are without exception the most desirable for bedding. The stock we offer are extra heavy, two-year-old, budded, nursery grown, which, if planted in the early spring, are guaranteed to bloom from June until frost, and are not to be confused with the stock which has been forced in greenhouses all winter and after being discarded by growers because of weakened condition due to hard forcing, is offered for sale as flowering stock by unscrupulous dealers.

Budded plants are more vigorous, produce more and better flowers, and are more hardy and less susceptible to disease.

These plants can be supplied in dormant stock, on orders placed with us before March 15th, for delivery up to April 15th. From our experience in the past with roses, dormant stock should be planted before April 15th. After this date we offer all the varieties listed below in 6-inch pots.

Kennedy Kwality Fruit Trees

Our Stock is all heavy grade with good root system and free of disease

Largely as a result of experiments and breeding by the New York State Department of Agriculture in co-operation with the New York State Fruit Testing Co-operative Association, most fruits have been greatly improved in size, color, texture and flavor. This was accomplished by breeding greater immunity to certain diseases, as for example peach mildew, apple scab, etc.

Nurserymen now have available for sale new varieties, which so far surpass the standard varieties that we believe some of the old favorites should be discarded. We earnestly urge our customers to consult our list when you are contemplating replacements or renewals in your orchards and vineyards.
